

# NEGATIVE SPACE

Negative Space is an important and often over looked area of art - especially graphic design and drawing.

Negative Space is the leftover area of your picture plane - the area not actively involved in the drawing (think of the Zen philosophy that the most important part of a bowl is what is missing). Negative Space should never be overlooked.

Choose three NOUNS and draw each in one of the the four sets of squares below - the trick - draw only what is leftover - do not draw the object itself. Take your best solution, the one that creates the most interesting composition and redraw it in the large square below the applicable set of four.
